## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-29, drawn to plural supply circuits, classified in class 307, subclass 43.
  - II. Claims 30-34, drawn to switching control circuits responsive to a condition, classified in class 307, subclass 116.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the timer circuit for providing a control signal based on the duration of a temporary load state signal. The subcombination could be used in any load control arrangement other than a dual power supply arrangement.
